

NEKTON Calcium-Plus contains organic calcium and magnesium as well as high-quality B vitamins.

Organic calcium and magnesium are absorbed very well and quickly and are particularly suitable for supporting breeding and for remedying calcium deficiency.

Calcium in combination with magnesium prevents interactions and their consequences, such as magnesium deficiency. Due to the additional enrichment with B vitamins, which have a positive effect on the nerves, **NEKTON Calcium-Plus** enables balanced breeding and compensates for nutritional deficiencies.

Calcium is important to birds in many ways. Calcium is important for the development of bones and for the normal functioning of the body. If its value is too low, it can lead to health problems, such as cramps in the muscles. During breeding, females need a lot of calcium, as this is particularly important for the formation of the eggshell and its stability. In the case of calcium deficiency, the structure of the eggshell changes and it can lead to the death of the embryo. The embryo gets its initial calcium from the eggshell. Because of this, the need for calcium during the breeding season increases. When females are fed a low-calcium diet over a long period of time, calcium reserves from bones are depleted, eventually leading to bone damage. Therefore, an additional supply of calcium during bird breeding is particularly important.

Composition:

Dextrose, magnesium lactate

Analytical constituents:

Ca 7.5 %, Mg 1.8 %

Nutritional additives per kg:

1,500 mg vitamin B1 (thiamine mononitrate), 3,400 mg vitamin B6 (pyridoxine hydrochloride)

Technological additive:

Calcium lactate (pentahydrate)

Available sizes: 35 g, 140 g, 330 g, 650 g

Feeding recommendation:

4 g (= 4 level measuring spoons) every 2nd to 3rd day.

8 g (= 8 level measuring spoons) daily before and during breeding.

12 g (= 12 level measuring spoons) daily in case of deficiencies.

Dissolve NEKTON Calcium-Plus in 250 ml of water or in 100 g of soft food.
