

NEKTON-R

*Pet feed supplement to intensify color
for red areas in the feathers*

NEKTON[®]
PRODUKTE
...tierisch gut!

NEKTON-R a pet feed supplement that was specially developed to intensify the color of the red areas in the plumage.

NEKTON-R prevents feather colors from fading and can help to support the bird's health in a natural way during the molting period.

NEKTON-R contains pure brewer's yeast & yeast cell walls and combines the advantages of the prebiotic and immune-stimulating effects of yeast cell walls with valuable nutrients of brewer's yeast.

On the one hand, brewer's yeast is a high quality source of protein, on the other hand a valuable supplier of various nutrients and active substances.

The nutrients contained in the brewer's yeast have a positive effect on the bird organism and are important components for new plumage, which are increasingly needed during

molting. Brewer's yeast can strengthen the bird's immune system and can help support the intestinal flora.

In addition to brewer's yeast, **NEKTON-R** contains brewer's yeast cell walls, which consist of mannan oligosaccharides (MOS) and β -glucans. They can reduce the number of harmful bacteria in bird's intestine and increase the number of beneficial bacteria.

The need for individual amino acids during the moult is particularly high. An insufficient supply of the bird with amino acids can lead to a delayed change of feathers as well as disturbances of the feather morphology (such as, for example, curved or very soft feathers). **NEKTON-R** contains 18 amino acids, which can support the formation of new plumage during the strenuous molting period

A daily diet must contain sufficient vitamins, minerals and trace elements for a functioning metabolism and therefore a combination of **NEKTON-R** with **NEKTON-Biotin** or **NEKTON-S** is recommended.

The colorant used is identical to the natural substance and is thus physiologically safe. It is also used in the food industry to color food products.

NEKTON-R is administered in the drinking water or soft feed at the beginning of molting/rearing until the end of molting or as soon as the bird's color is fully restored.

Contains 18 amino acids.

Statement of Ingredients: Dextrose, brewer's yeast, brewer's yeast cell walls (contains mannanoligosaccharides and β -glucans)

Sensorial additive: Dye

Also in our assortment:

NEKTON-R-Beta

Pet feed supplement to intensify color for **salmon-colored areas** in the feathers

NEKTON-Gelb

Pet feed supplement to intensify color for **yellow areas** in the feathers

NEKTON-Orange

Pet feed supplement to intensify color for **orange areas** in the feathers

Available in the sizes: 35 g, 150 g, 700 g

Feeding recommendation:

1 g (= 1 measuring spoon) of **NEKTON-R** in 250 ml of water or in 100 g soft feed daily for approx. 10 small birds (e.g. canaries). Apply only during the plumage growth.
